

A clear view of AI capacity.

Native to Plasma. Recognizable everywhere.

Kodometer brings AI-provider quotas, balances and reset windows into the desktop.
The identity pairs an open gauge K with compact custom lettering and Soft Iris.
This pack covers the Plasma 6 widget, website and supporting brand materials.

The signature

The gauge is the first K. The wordmark continues directly with odometer.

Use the outlined SVG master as the source of truth.

The rising e crossbars echo the needle. Keep the approved close K-to-o spacing.

Do not type a second K, substitute a font, stretch the logo or rearrange its parts.

Color and single-color versions

Choose the version for the actual background.

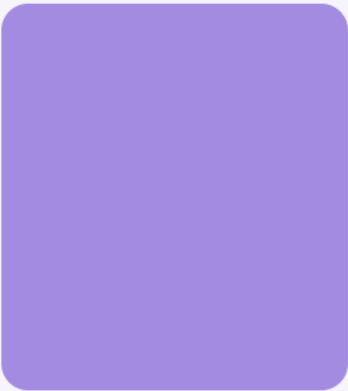

Kodometer

Iris-on-dark is the primary dark treatment. Mono artwork is available for constrained uses.

Soft Iris palette

Fixed brand colors for artwork and controlled website surfaces.

Iris

#A28BE0

Deep Iris

#7052B5

Pale Iris

#C2B0E8

Ink

#252333

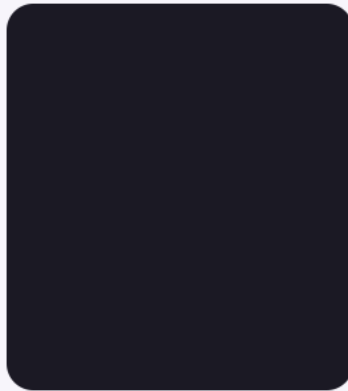

Cloud

#F7F5FB

Mist

#B8B0CB

Night

#1B1924

Iris is the signature accent. Deep Iris supports light-surface controls and graphics. Ink, Cloud and Night provide the neutral foundation. Mist supports secondary content. Use accent color selectively; reserve status colors for their meaning.

Website colors

A complete light and dark token set is included in website/colors.css.

Know your capacity.

AI usage, clearly presented.

Know your capacity.

AI usage, clearly presented.

Explore Kodometer

Light: Cloud canvas, white surfaces, Ink text, Deep Iris actions.

Dark: Night canvas, Ink surfaces, Cloud text, Iris actions with Night labels.

White on Deep Iris: 5.89:1. Night on Iris: 6.03:1.

Use the supplied stronger control border for input outlines; pale dividers are decorative.

Native to Plasma 6

The user's desktop theme controls the interface.

BACKGROUNDS, TEXT & CONTROLS

Inherit Plasma / Kirigami theme roles for surfaces, text, selection and focus.

Do not force website hex values into the popup or override the desktop font.

PANEL & METERS

Use the symbolic icon with the panel foreground. A light and dark fallback is included.

Use the system highlight for meters, or an optional Iris accent after surface checks.

Use Deep Iris on light surfaces and Iris on dark surfaces when brand accents are enabled.

PROVIDERS & STATUS

Keep provider identity colors distinct. Use desktop semantic colors for status.

Pair quota warnings with labels or icons; do not depend on color alone.

Icons at every scale

A detailed mark for large uses; a simplified symbolic mark for the panel.

Panel exports: 16, 22, 24, 32, 48 and 64 px. Full icons: up to 1024 px.

The small mark omits the lowest gauge segment to reduce visual clutter.

Favicons include SVG, PNG, multi-size ICO, Apple touch and web manifest assets.

Space and typography

Preserve the letterforms. Let the interface remain native.

CLEAR SPACE

Keep at least one K stem width clear on every side of visible artwork.

The transparent files include modest framing; add layout space around them.

MINIMUM SIZE

Full wordmark: recommended minimum 180 CSS px or 40 mm in print.

Below that size, use the standalone icon. Symbolic icons include a 16 px rendition.

TYPE

Logo lettering is outlined, inspired by the supplied Neo Sans Pro Medium reference.

The custom e is built into the artwork. No font installation is required for the logo.

Plasma uses the desktop font. Websites use the supplied system sans-serif stack.

The commercial font file is not included; a separate text-use license is not supplied.

Status and accessibility

Website status colors are paired; Plasma status colors remain theme-owned.

WEBSITE / FOREGROUND ON BACKGROUND

Success #24704F on #EAF6EF Warning #855710 on #FFF4DD

Error #AB354D on #FCEEF1 Info #34649C on #EDF3FC

CONTRAST

Defined website status pairs exceed 5.4:1. Body text exceeds 14:1.

These figures apply to the exact opaque pairs, not to arbitrary desktop themes.

BEFORE SHIPPING

Check symbolic recoloring, light/dark/custom themes and translucent panels.

Check focus, disabled states and meter visibility in the actual running widget.

Keep labels available for status and data; never use accent color alone as a key.

Files and handoff

SVG masters are editable paths. PNGs are ready for use.

logos/ Full wordmarks: light, dark, deep-iris and monochrome

icons/ Standalone marks and light/dark app tiles

plasma/ Symbolic theme-aware SVG and fixed-color size exports

favicons/ Browser icons, Apple touch icon and installable-site manifest

website/ CSS tokens, JSON color data and integration snippet

boards/ Identity board in SVG and PNG

guide/ This PDF plus SVG and PNG page sources

The repository has not been modified. Integration examples require project wiring.

Artwork was rebuilt as vector paths from the approved concept and font reference.

The native widget has not been runtime-tested in this Windows environment.
